• The exam is worth 70% of the mark for the unit. It is 2 hours long, plus 10 minutes reading time. No notes or books are allowed. A non-programmable calculator is permitted.

• The paper comprises 6 multi-part questions of equal value. Note that there is no multiple-choice or short-answer section.

• **Important note:** the MATH2069 and MATH2969 exams have an overlap, and appear in parallel in the same paper. **You may only answer the questions for the unit you are enrolled in; answers for the wrong unit’s questions will not be marked.**

• The majority of the parts are of the same kind as tutorial/assignment questions. There are some parts which require only an answer, and others for which an explanation/proof is requested.
