Computational experience

Andrew is the author of the GAP share package `SPECHT` which is used for research by mathematicians worldwide. This package is one of the main computational tools in the modular representation theory of the symmetric groups, Hecke algebras and q -Schur algebras. It is distributed as part of GAP 3.4.4 and it is currently being ported to SAGE. Andrew has also made significant contributions to `CHEVIE`, a package for computing with Coxeter groups, Iwahori–Hecke algebras and groups of Lie type. Computational techniques often play an important role in the initial stages of Andrew’s research.
